

HUYNH MINH TRI - SOFTWARE ENGINEER

0982294937 | huynhminhtri1109@gmail.com | <https://github.com/HuynhTri-dev>

SUMMARY

Entry-level Software Engineer focused on backend development and Agentic AI integration. Hands-on experience building Python-based services, event-driven data pipelines, enterprise workflows, and RAG-based AI agents using FastAPI, LangGraph, Qdrant, and Neo4j. Experienced in taking features from backend design and data processing to testing, evaluation, and containerized deployment.

WORK EXPERIENCE

Rita Vo - Hồ Chí Minh

Software Engineer – Odoo Developer

Mar 2026 – Jul 2026

- Developed the ProdID module within an internal Odoo 18 system to manage the product lifecycle from procurement or manufacturing through marketing, approval, and commercial readiness across R&D, Marketing, Sales, and Purchasing.
 - Built product management, dynamic attributes, Excel import/export, approval workflows, audit tracking, access control, media, and DFS-based BOM cycle detection for approximately 10,000 product records.
 - Deployed the system to staging with Docker Compose and implemented a GitHub Actions CI pipeline with automated testing and build validation.
-

PROJECT

Agentic AI Personal Health Management - Solo Developer

Mar 2026 – Jun 2026

- Designed and implemented the backend and Agentic AI architecture for a personal health management platform using FastAPI, LangGraph, Kafka, Redis, Qdrant, and Neo4j, with Flutter as the mobile client.
- Built a real-time biometric processing pipeline using Kafka, applying Z-score anomaly detection and Welford's algorithm to maintain personalized baselines from wearable health data.
- Developed a multi-step ReAct agent and HybridRAG pipeline combining BGE-M3 embeddings, BM25 retrieval, WRRF fusion, Qdrant semantic search, and Neo4j graph traversal.
- Evaluated the system on a 100-question benchmark using RAGAS, achieving 0.85 Answer Relevancy, 0.78 Faithfulness, and 90% safety recall across 20 high-risk scenarios.

SKILLS

- Languages: Python, TypeScript, SQL
- Backend & AI: FastAPI, Node.js/Express, Odoo 18, LangGraph, RAG
- Data & Infrastructure: PostgreSQL, MongoDB, Redis, Qdrant, Kafka, Docker, GitHub Actions
- Frontend & Mobile: Flutter, Next.js

Soft: Leadership (Academic & Extracurricular teams) | Agile Mindset (Kaban, Sprint planning) | Proactive Communication | Analytical Problem Solving | Fast Learner (UI/UX, Mobile Tech, Odoo).

English: B1 — technical working proficiency

EDUCATION

Ho Chi Minh City University of Technology

Sep 2022 – Oct 2026

Major: Information Technology - Software Engineering

GPA: 3.61 / 4.00

- Top 5 Excellent Projects “Design Your Future” Competition | CJ Corporation (2025).
- Consolation Prize – Open Source Software Category | 2025 Vietnam Student Informatics. Olympic (OLP): <https://github.com/sonmessia/GreenWave.git>.
